

2016 ASN Canada FIA Briggs & Stratton Regulations

Information Bulletin

June 7, 2016

Reference: Section 18. Carburetor & Intake Manifold

This document is to clarify the Venturi measurement procedure of the Walbro and Briggs & Stratton branded carburetor used in LO206 classes.

Carburetor Venturi measurements are to be taken from both the inlet and outlet sides of the Venturi.

Measurement of the Venturi can be made by the tools listed in the Briggs & Stratton LO206 regulations.

If a carburetor is suspect, Technical Inspectors may also use any appropriate tool they see fit to make precise measurements.

Any carburetor that does not meet the Venturi specifications listed in 2016 ASN Canada FIA Briggs & Stratton regulations is deemed to be illegal.

It is the competitor's responsibility to assure the conformity with the technical regulations at all times.
